

Electronic Air Cleaner Prefilter & Afterfilter

Using a washable electrostatic prefilter, instead of a standard aluminum mesh prefilter, will significantly enhance the working efficiency of an electronic air cleaner. The air cleaner is able to perform more effectively for a longer period of time before needing cleaning. An activated carbon afterfilter will adsorb odors or fumes being recirculated through the home, remove ozone, capture ash brush-off from the plates and particles that did not take an electrical charge.

Activated carbon afterfilters are disposable as it reaches the saturation point and available in 4-packs replacements.

MODEL # EAC-KIT
MODEL # EAC-AC4

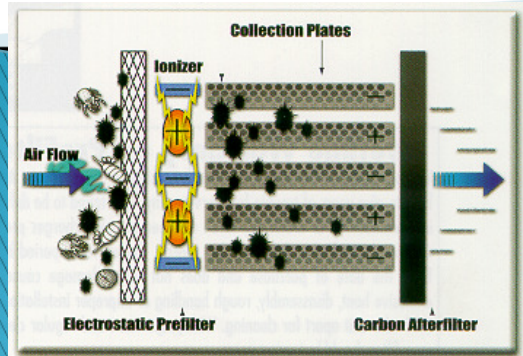

- Upgrade kit includes 1 set::
 - ¼" thick polypropylene prefilter
 - ¼" thick activated carbon afterfilter
- Individual polypropylene or aluminum mesh prefilters are also available
- Initial Air Flow Resistance with EAC-R prefilter: 0.09" w.g.
- Initial Air Flow Resistance with Metal Mesh prefilter: 0.11" w.g.
- U/L Classified as to Flammability Only
- Lifetime Warranty on Polypropylene Prefilter
- 5 Year Warranty on Metal Mesh Prefilter

MODEL # EAC-R
