

## Cut-To-Fit Vent Air Filters

The air circulating throughout the ventilation ducts contain countless contaminants including allergy triggers that you cannot see. Dust and debris constantly enter the HVAC system, and cause build up throughout the ducts and on furnace components. Vent filters will keep dust of recirculating in the air.

Vent filters are made from electrostatic filtration media and should be installed in the intake vents and return vents. Simply cut-to-fit the media with scissors, and install the filter underneath any vent deflector. Vent filters are available in three styles.

- MODEL #VF-NWPE10
- MODEL #VF-NWPE30
- MODEL #VF-BHB10
- MODEL #VF-BHB30
- MODEL #VF-ACF10
- MODEL #VF-ACF30

**Model VF-NWPE:** White sheets of high loft disposable non-woven polyester filter media.

**Model VF-BHB:** Black or white sheets of washable electrostatic polypropylene filter media. Media has a natural static “charge” that won’t wash out, you can reuse over and over.

**Model VF-ACF:** Black sheets of disposable odor and fume removing activated carbon impregnated polyester filter media. Filter offers dual action media for dirt/dust and odors, carbon won’t brush off.

- Each kit contains (3) 12”x16” sheets of media, enough to cover up to 12 standard register vents
- U/L Classified as to Flammability Only
- Display 10-pack case or commercial bulk 30 piece case
